"ePlanIt's remote camera system is an integral part to our daily project tracking work progress. It has saved us money documenting issues with construction, reducing theft and verifying we safety compliance. Administrators, Project Managers and Safety Managers all benefit from being able to see live images and playback. Property Owners and Developers like the fact that we give them access to a live camera feed of their site. I insist on an ePlanIt camera for every site possible."

Warren Andres - Andres Construction

Tired of long drives to your construction sites? Do you need jobsite monitoring to help to prevent theft and improve efficiency? Introducing a revolutionary and cost effective job site monitoring and surveillance system. ePlanIt's Mobile Video Tower is the construction camera solution you've been looking for.

Mobile Video Tower (MVT)

State of the Art Technology

We've integrated the latest technology in high-resolution cameras, wireless Internet, solar power, and digital video recording software. Our MVT is completely self-contained, trailer mounted, stabilized, and does not require any external connections for full operation. The system sets up in less than an hour and can be moved quickly and easily. Monitoring and controlling your camera is simple, just log into your account and our Network Video Recorder (NVR) let's you view live feeds from up to 32 cameras or replay up to 30 days of recorded digital video.

Reduce Jobsite Theft

While jobsite theft is a problem on every construction site, video surveillance has been shown to significantly reduce tool, material, and equipment theft. Cameras can be programmed to automatically scan a site to focus on entrances, parking lots, storage buildings, and equipment.

No Experience Required

At ePlanIt, we know that your focus is on construction, not Internet Technology (IT) or sophisticated software and camera applications. We install the cameras for you, show you how to easily access them on-line, maintain them, and provide any technical support and training for free. Our support staff is available 24/7 to fix any problems or answer questions throughout the project.

Save Travel Time and Resources

Traveling to and from job sites to monitor progress or solve problems is time consuming and costly. A high-res remote controlled Internet camera allows supervisors and key personnel to view your jobsite from any computer with web access.

Our Network Video Recorder (NVR) software interface lets you control each camera's live feed to look wherever you want and the cameras are ideal for close inspection so you can catch problems before they happen.

- Mobile high resolution pan/tilt/zoom (PTZ) camera with 30X optical zoom
- Solar power and wireless internet means no external connections are needed for operation
- We do all the work, set-up, tech support, and maintenance included
- Network camera control allows remote monitoring from any computer
- Recorded history for easy search and playback
- Customer accounts with multi-level security access
- Reduce theft and improve efficiency
- Monitor up to 32 cameras simultaneously from any computer or HDTV
