Mobile Project Management Puts Budget Supervision in the Palm of your Hand

Frisco, TX --- August 3, 2009 --- ePlanIt today announced a new Mobile Project Management (MPM) application for iPhone and iTouch devices designed specifically for the construction market. Expanding their suite of construction management tools, this new software simplifies budget management by tracking workers, tasks, units, equipment, and materials in real time. Used in conjunction with ePlanIt's Labor Tracking System, supervisors can instantly check who is working on a project, how long they have been on the jobsite, and what they are working on. Information collected directly from the field can then be compared to project budgets to determine if individual tasks are ahead or behind of schedule.

Project supervisors can use the new MPM software to manage multiple projects simultaneously. Utilizing the iPhone's unique interface, supervisors can enter percent complete, daily logs, and request materials and equipment. Data entered on the iPhone is sent to a project website where it can be accessed by corporate executives, owners, developers, and other project supervisors. The MPM software also integrates with ePlanIt's video camera technology allowing jobsite cameras to be remotely viewed and controlled in real time.

Ron Toupal, ePlanIt's President, states "We are very excited about this new technology. Our beta test customers were able to replace their laptops with iPhones and improve project oversight and productivity. Feedback from the field has been extremely positive. The user-friendly interface makes accessing critical information easy, as a result project managers are better able to track their mobile work force and deploy workers more efficiently"

Plans are already underway to port the application to other mobile devices such as the new Sprint HTC Touch Diamond running Windows Mobile 6.1 and T-Mobiles G1 Smartphone based on the Google Android operating system.

ePlanIt is based in Frisco, Texas and provides next generation enterprise software technology to the construction industry. Their suite of products includes GPS labor and vehicle tracking, mobile video towers, and on-demand construction management software. More information about ePlanIt can be found online at www.eplanit.com or by contacting Tim Adkison at 214-472-3412.
