Web Cameras Broadcast Construction of the Dallas Cowboys New Stadium

Frisco, TX --- November 6, 2007--- Get a front row seat of the construction going on at the Dallas Cowboys New Stadium. ePlanIt, in conjunction with the Dallas Cowboys and Manhattan Construction have installed two jobsite web cameras to monitor construction of the new stadium. Live online feeds from the cameras are available to the public at ePlanIt's website: www.eplanit.com. The high resolution cameras automatically scan the jobsite and send out new images every two seconds, providing real-time observation of the exciting new stadium construction.

ePlanIt's rugged mobile video towers are built specifically for construction and use the latest in high-resolution cameras, wireless Internet, solar power, and digital video recording software. The stadium cameras are able to cycle through up to 32 preset views and wirelessly broadcast the images back to a central network video recording complex for archival and review. Using ePlanIt Project™, an online construction management environment, supervisors at Manhattan Construction can manually control the cameras to monitor specific locations and zoom in for detailed views.

Ron Toupal, ePlanIt's president says "We're very excited about the opportunity to work with Manhattan and the Cowboys to demonstrate the capabilities of these camera systems". Recent advances in technology enabled ePlanIt to launch their new line of self-powered wireless construction cameras earlier this year. Leased for a fraction of the cost of typical jobsite cameras, they are currently being used at numerous construction sites throughout Dallas, Fort Worth, and Texas. Each 30-40 foot camera tower is trailer mounted and requires no external connections for full operation. The towers can be set up on jobsites in less than an hour and moved quickly and easily.

ePlanIt is based in Frisco, Texas and provides next generation technology solutions to the construction industry. Their suite of products includes GPS labor and vehicle tracking, mobile video towers, and on-demand construction management software that integrates all project data into a single website. More information about ePlanIt and their services can be found online at www.eplanit.com or by contacting Tim Adkison at 214-472-3412.
